ECOLOGICAL POLITICS OF CPC BIOCON LLC version 03 of 02 August 2021

Limited Liability Company "LLC "Biocon" (hereinafter referred to as the Company) adheres to the basic ecological principles in its work and tries to do the least harm to the environment.

Company understands its commitment to the local and global environment and strives to be an exemplary and responsible business entity, as well as a responsible neighbor in the community.

Business growth and minimization of environmental impact due to continuous improvement is a fundamental policy of our Company.

The environmental policy of the Company includes:

- Compliance with applicable laws and voluntary commitments made by the Company in relation to environmental protection during its activities.
- Informing Company's employees about our s environmental goals, objectives, programs and constantly updating information on such goals, objectives, programs.
- Constant monitoring and documentation of parameters related to our key environmental indicators and targets.
- Minimization and control of emissions, discharges and other types of air, water, and land pollution: We have built rainwater treatment plants on the territory of the complex, which protect against the ingress of pollutants into groundwater, as well as provided domestic water treatment.
- Reduction of waste due to reuse for recycling: we always strive for improvement, and therefore the Company has signed several contracts for destruction and recycling with authorized organizations
- Adherence to best practices through monitoring and reviewing the level of energy consumption and other natural resources to use these resources efficiently. Implementation of the latest technologies: heat and cold supply is carried out due to the operation of heat pumps from the geothermal source, which reduces air emissions from the gas boiler room
- Search for possible ways to improve energy efficiency and reduce emissions of carbon dioxide (CO^2) and other greenhouse gases associated with energy consumption
- Encouraging our employees to be more conscious of the environment and motivating them to work in accordance with the principles of environmental responsibility.
- Raising awareness of colleagues about the application of continuous efforts to improve energy efficiency and prevent energy loss during the operational working hours
- Informing Company's partners about the environmental responsibility and encouraging them to maintain and promote the improvement of the environment
- Motivating for continuous improvement and revision of indicators and minimization of social consequences and losses.
